Our shot moulded and jointing techniques at Cellular Developments are perfect in applications where a frame or intricate extrusion has to be joined. We are capable of producing solid and open joints for seals and gaskets in a variety of materials. We can develop a new products with you or work with your issued materials or extrusions, working from CAD Data to produce tooling and working jigs. This allows for the same material to be used for the joint as the extrusion giving a strong and uniform joint. This can be a flat seal or a mitred corner joint.

Some of our current applications are used for jointing corners for door and window seals on buses and trains, to large gaskets for industrial use.
